IDENTIFIERS *Middle School Students; Writing Attitudes

ABSTRACT

This 64-item bibliography focuses on the effect of keyboarding on middle school students' composition writing, using word processing. The bibliography (which surveys selections dating from 1956 through 1989) includes those studies describing the feasibility of teaching touch typing keyboarding skills to middle school students, the value of acquiring this skill, and the place of the computer and word processing programs in the elementary school language arts program. Additionally, studies that have attempted to measure the effect of word processing on middle school students' writing performance, studies of students' attitudes toward computers and writing, and studies that have attempted to validate holistic scoring methods for qualitative assessment of writing ability are included. Keyboarding, Word Processing, and Middle School Language Arts: A Bibliography

In a review of the literature related to the study the effect of keyboarding on middle school students' composition writing using word processing, the following bibliography was established. The bibliography includes those studies describing the feasibility of teaching touch typing keyboarding skills to middle school students, the value of acquiring this skill, the place of the computer and related word processing programs in the elementary school language arts program. Additionally, studies that have attempted to measure the effect of word processing on middle school students' writing performance, studies of students' attitudes towards computers and writing, and studies that have attempted to validate holistic scoring methods for qualitative assessment of writing ability are also included.
